

Challenge

Backend Developer

This test should take you around 4 hours to complete. You can of course spend more time if you think it is necessary.

Challenge

This is what you need to do:

1. Create an endpoint that provide the ATMs around a specific coordinates: latitude and longitude and within a specific range (radius).
2. Results should be sorted according to user preference: time to reach (walking or by car) and others option.
3. In the results should be included the name of the shop and the distance from current user.
4. Implement a test case using Mocha or Jasmine
5. Create one automation (start, stop, launch a battery test) with one of Ant, Maven, Gradle, or Gulp.js
